XƎLATEX-example

Niko Partanen   Michael Rießler

April 8, 2017

This document demonstrates basic usage of XƎLATEX, with special focus in linguistic data. Actually the idea is to reproduce more or less the same document in various formats besides LaTeX, for example, in RMarkdown and Jupyter Notebook.

1 Linguistic examples

(1) *A   сійö   нинöм   эз   шу*
    and   he   nothing   neg.3SG.PST   say.CONNEG

    'And he didn't say anything.'

2 Using BibLaTeX

Here are a few basic examples for the use of citations with BibLaTeX. Michael is not sure whether all these functions work in markdown as well.

- Mention of a whole work in the text:

    Possibilities of adding morphological analysis automatically to ELAN files were recently demonstrated by Gerstenberger, Partanen, and Rießler 2017.

- Mention of an author with reference to a specific work:

    Possibilities of adding morphological analysis automatically to ELAN files were recently demonstrated by Gerstenberger, Partanen, and Rießler (2017).

- Mention of an author with reference to a specific work and specific pages:

    Possibilities of adding morphological analysis automatically to ELAN files were recently demonstrated by Gerstenberger, Partanen, and Rießler (2017, pp. 10-11).

- Reference for a statement in the text:

    Komi is a Uralic language (Gerstenberger, Partanen, and Rießler 2017, p. 2).

- Reference for a statement in the text, incl. additional notes:

    Komi is a Uralic language (against the statement made by Gerstenberger, Partanen, and Rießler 2017, p. 4).

- Mention of several authors with reference to specific works and specific pages:

    Possibilities of adding morphological analysis automatically to ELAN files were recently demonstrated by Gerstenberger, Partanen, and Rießler (2017, pp. 10-11) and Gerstenberger, Partanen, Rießler, and Wilbur (n.d., p. 2).
