RMarkdown example

This document demonstrates basic usage of RMarkdown, with special focus in linguistic data. Actually the idea is to reproduce more or less the same document in various formats, for example, in LaTeX, RMarkdown and Jupyter Notebook.

If RMarkdown is compiled into PDF, it is possible to add plain LaTeX into it.

(1) *A   сійö нинöм эз   шу*
     and he   nothing neg.3SG.PST say.CONNEG

  'And he doesn't say anything.'

Possibilities of adding morphological analysis automatically to ELAN files were recently demonstrated by Gerstenberger et. al. (Gerstenberger, Partanen, and Rießler 2017).
